### DETAILED ACTION

The requirement for election of species, set forth in the Office action of 2/8/2007 is withdrawn, and a new, reformulated requirement for election is set forth below, taking into account the newly-submitted claims. (It was not clear to the examiner how the newly-submitted claims 37-39 would be drawn to the elected species, as stated in Applicant's response.)

This application contains claims directed to the following patentably distinct species:

1. A method of co-depositing metal ions and carbon nanotubes, including spin-coating (claim 17, 40-41)
2. A method of co-depositing metal ions and carbon nanotubes, including the use of an electric field (claim 15)
3. A method of co-depositing metal ions and carbon nanotubes, including forming a passivation layer or a barrier layer (claims 19, 31-34, 37-39)

The species are independent or distinct because each set of claims identified above requires a feature not required by the other sets of claims, and because none of the features identified would be obvious in view of another.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-11, 18, and 35-36 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.
